PROFESSIONAL SUMMARY

Software engineer focused on backend systems — Python microservices with FastAPI, event-driven pipelines on MongoDB and Kafka, REST APIs, and CI pipelines that build, test, scan, and publish their artifacts. At Wells Fargo, delivered three production Python microservices in the AVRS internal platform and authored GitHub Actions pipelines for Autosys JIL and Android builds. Recently extending into MCP servers with FastMCP — backend services designed for LLM agents instead of human-facing apps. Comfortable across distributed systems, relational and non-relational databases, CI/CD, and end-to-end feature ownership.

WORK EXPERIENCE

Wells Fargo

July 2025 – Present

Associate Engineer

Charlotte, NC

- Built the AVRS Orchestrator microservice in Python: a poller thread ingesting documents from a MongoDB source collection into a tracker collection, and a router thread dispatching tracker documents to multiple AI agent providers that auto-open remediation PRs in associated repositories
- Built the AVRS Tracker microservice subscribing to multiple Kafka topics with one consumer thread per topic, scanning messages for state-transition signals and synchronizing tracker-document state across providers
- Built the AVRS Cloud Agent Provider microservice that polls the tracker collection for ready documents, extracts vulnerability data, and creates GitHub issues assigned to GitHub Copilot for remediation
- Authored reusable CI pipelines on GitHub Actions for Autosys JIL file builds and Android project builds — automating build, test, scan, and artifact publishing steps for application teams
- Participate in code reviews, design discussions, and knowledge sharing across Python codebases; use Claude and AI-powered developer tools daily to accelerate delivery

PROJECTS

PoppyCox Data Ingestion Pipeline | *Python, PostgreSQL, Supabase, dbt, Toast API, Plaid API* 2026 – Present

- Built a scheduled data ingestion pipeline pulling operational and financial data from the Toast and Plaid APIs into a PostgreSQL warehouse on Supabase, running a daily 5:00 AM EST ingest job
- Engineered a nightly dbt transformation job (midnight) that rebuilds gold-layer analytics tables, while deliberately excluding the payroll calculations and payouts table to preserve it as an immutable, auditable record of history
- Modeled data powers a Next.js back-office web application for operations such as running payroll and viewing employee hours, with a planned mobile app to surface insights from customer and item-sales data

Clarus | *Flutter, Dart, Supabase, PostgreSQL, REST APIs, MethodFi, Plaid, OAuth* January 2026 – Present

- Building a cross-platform, full-stack consumer financial app integrating MethodFi and Plaid (including Multi-Item Link) to aggregate accounts, balances, and liabilities from 1,000+ financial institutions into a unified data model
- Designed and shipped a debt-payoff optimizer comparing avalanche, snowball, and dynamic-programming-based strategies under realistic cash-flow constraints, modeled to reduce total interest ~50% and shorten time-to-debt-free by 12–24 months
- Designed the backend data layer on Supabase Postgres with row-level security policies enforcing per-user multi-tenant isolation across 10 tables, and owned the feature end-to-end from UI through API integrations to data model

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Dart

Backend & APIs: FastAPI, FastMCP, REST API design, microservices, distributed systems, event-driven architecture, batch & real-time pipelines, Kafka, Spring Boot

Databases: PostgreSQL, MongoDB, MySQL, dbt, row-level security, multi-tenant data modeling

DevOps & CI/CD: GitHub Actions, CI/CD pipelines (build, test, scan, publish), Docker, Kubernetes, Git/GitHub, JFrog Artifactory, Linux, observability, unit & integration testing

AI / Agents: MCP servers, LLM integration, AI agent orchestration, Claude / AI-powered developer tools

Frontend: React, TypeScript, JavaScript, HTML, CSS, Flutter, responsive UI, cross-platform development

EDUCATION

North Carolina State University

Raleigh, NC

Bachelor of Science in Computer Science, Magna Cum Laude — GPA: 3.6/4.0

May 2025
